

To eliminate tuberculosis in Canada, we need a:

National TB elimination strategy

...developed in collaboration with provinces and territories, Indigenous leaders, and TB-affected community partners, which would include specific strategies, guidelines, and the funding required to:

1 Improve TB screening strategies among high-priority groups.

2 Address the social determinants of health and barriers to TB care.

3 Improve access to essential medicines for TB treatment.

4 Implement a timely tuberculosis surveillance infrastructure.

5 Adopt accountability, monitoring, and evaluation measures for programming.

What can you do as a Member of Parliament?

- Meet with Stop TB Canada & CTS to learn more
- [Sign this letter](#) to the Minister of Health
